

The ORIGINAL Eel & Fish Friendly Pump

Hidrostal specialise in Eel and Fish Friendly Pumping and are Inventors of the Original Fish Friendly Pump.

It's hard to imagine even a single fish passing unharmed through rotating machinery, but the original fish friendly pump design, created by Martin Stähle, the founder of Hidrostal, revolutionised the bulk off-loading of fishing fleets.

Through the development of a single, corkscrew shaped impeller, Martin created the patented Hidrostal Centrifugal Pump design that has now been in continuous production for over 50 years.

Throughout its life this innovative design has been subject to continuous improvement and refinement, resulting in the comprehensive range of eel and fish friendly pumps that Hidrostal offers today.

KEY BENEFITS

- Up To 100% Survival Rate
- Many Independent Tests
- Worldwide Application Knowledge
- Continuous Development Of The *Original* Fish Friendly Pump – Designed Over 50 Years Ago
- Delicate Handling Experience
- Wide Range Of Pumps

Hidrostal's Services Include The Design Of Eel And Fish Friendly Pumping Systems, Supply, Installation, Commissioning And After Care
